FTPSuite™ for **REAL**basic Version 5.1.0

New Features

Now verified to work with compiled Linux applications. The following distributions have been verified by Apogee Development or one of our Beta testers:

CentOS
Fedora
Slax
Denbian

Others will probably work, but you should try a fully compiled version on any Linux distro you plan to support.

Bug Fixes

Delete Directory Smart Command works properly with file names that contain spaces.

NOTE

As of this release, we will no longer support REALbasic Standard Edition.
