Layer2 CLOUD CONNECTOR V5
for Office 365 and SharePoint

COMPATIBLE WITH
SharePoint Online • SharePoint 2013 • SharePoint 2010 • SharePoint Foundation

SharePoint   **Office 365**

Features & Benefits

The Layer2 Cloud Connector connects your line-of-business data to Microsoft SharePoint, Office 365, Dynamics CRM/ERP, Exchange, MS SQL and almost any other system:

- Extends the SharePoint capabilities to existing external data sets, that will continue to reside within your corporate network – directly connected to *native* SharePoint lists and libraries and always up-to-date.

- No programming or tools required: Setup in a few minutes guided by a wizard. No installation or customizing at SharePoint or data source required.

- 100% compatible to *ALL* SharePoint 2010 / 2013 offerings: On premise, externally hosted, Office 365, OneDrive for Business, or sandboxed.

- Reliable architecture: A connection is established only for data exchange – not for general usage.

- Secure data connection and transfer: The connector runs where your data resides today - on any server or client inside your corporate network with Internet connectivity available. No data is exposed to any 3rd party.

- High performance: Works great with large data sets.

- Almost any data source supported: ODBC, OLEDB, OData, .NET-based providers, file content (Excel, XML, CSV), File System Replication, SQL Server, Oracle, MySQL, IBM DB2, IBM AS/400, IBM Informix, PostgreSQL, Microsoft SharePoint, Dynamics NAV/CRM, Exchange, Active Directory, Navision, Lotus Notes, SAP, Web Services etc.

- SharePoint CSOM, OData, File System, XML/RSS, Exchange data provider included.

- Start workflows or send email notifications in the cloud on external data change. Add additional "cloud-only" columns, e.g. for rating, or file attachments. Aggregate your external data.

> *"A data-integration strategy needs to be within the foundation of your cloud computing plan. This integration needs to be innate to the architecture; it can't be something you're reminded of at the rollout meeting…"*
>
> David Linthicum in *Cloud Computing*
