

ReadMeFirst for SDC Private Messenger

By unzipping the downloaded file from SDC you have performed what is known as an 'X-Copy' install. This type of install process is essentially copying files to a desired location. The SDC Private Messenger does not register itself or adjust settings on your PC. You can rename or move this folder as desired. If you want to re-install the Private Messenger on another computer using your current license simply 'Deactivate' your messenger on this computer then copy the downloaded zip file or this folder to your new computer and reactivate.

Be sure to read 'EULA.pdf' included in this folder as it is your license agreement for using the Private Messenger.

If you are new to Secure Instant Messaging or secure software in general you might find this article helpful:

https://en.wikipedia.org/wiki/Secure_Instant_Messaging

Knowledge of encryption keys and their generation and handling is vital to get you started in the world of secure communications. Included in this folder is 'Generating and Distributing Encryption Keys.pdf' for that purpose.

Setting up your PC and Internet service for use by the Private Messenger is almost the same as the tasks needed for Internet multiplayer gaming or perhaps a home based email or file server. The included 'Prerequisites for Private Messenger 1.0.pdf' will detail those common tasks as well as those specifically needed for the Private Messenger.
