XGBookMax Elements Customization

**(Customization for: Control Panel - Print Panel - Slide Show Button
Thumbnail Panel Buttons)**

FOLLOW INSTRUCTIONS BELOW CAREFULLY

1. open the “customizationElements fla” file in the “customizeElements” folder;
2. in the “customizationElements fla” file open the flash library;
3. in the flash library you will find three folders:
 - **Custom_ControlPanel**
 - **Custom_PrintPanel**
 - **Custom_SlideShowButton**
 - **Custom_ThumbnailPanelButtons**

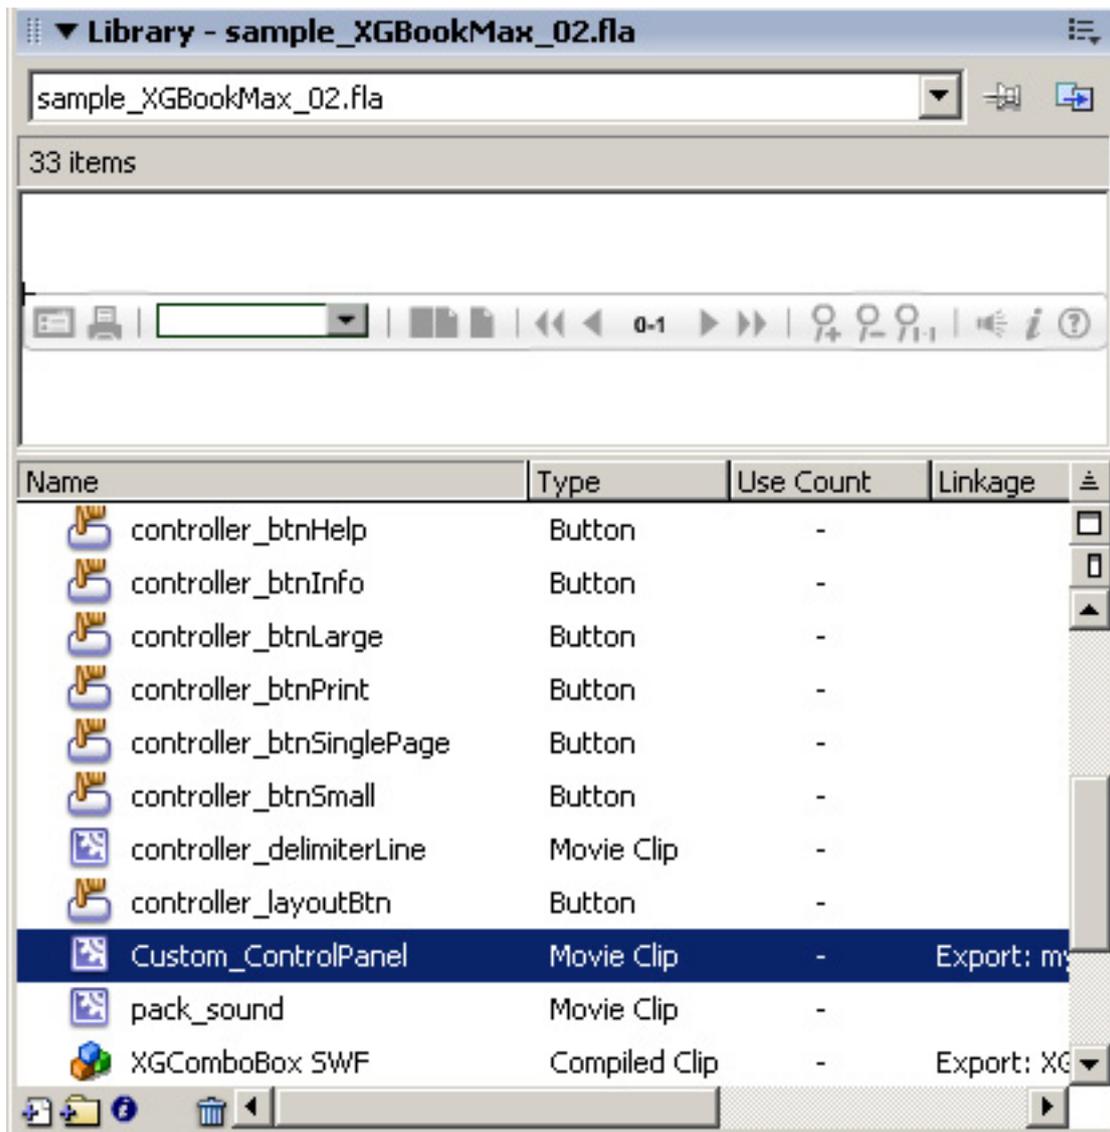

Copy (ctrl+c) and paste (Ctrl+v) these folders into the library of the flash file you are working on (this is the flash file in which you are using the XGBookMax Component).

NOTE: If you are using our “sample_XGBookMax_02 fla” (an not starting from a new flash file) you do not need to copy these folders. They are already included in the library. This is because “sample_XGBookMax_01 fla” has already customized elements.

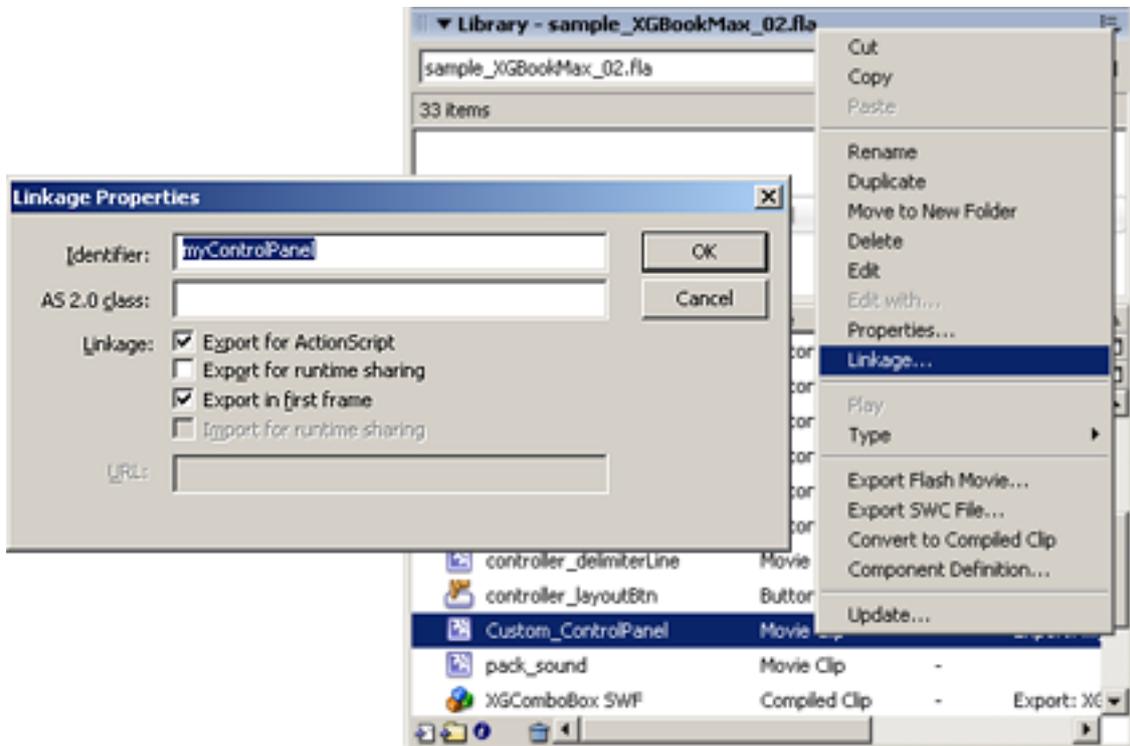

- 4) do the following:

1. CONTROL PANEL CUSTOMIZATION

- Open the “**Custom_ControlPanel**” folder and select the “Custom_ControlPanel” movie clip. This is the symbol that needs to be edited. Please, remember to **always use** and **edit** this symbol. It has the proper instance name. **Do not** make your own movie clip and **do not** use a different instance name, it will not work.

- Modify the “Custom_ControlPanel” movie clip to your liking.
- Give the “Custom_ControlPanel” movie clip “Linkage Properties” (REMEMBER: it will not work without).

- In the xml file define the attributes “customControlPanel” in the “<Configuration_Controller>” node.
Put the same “Identifier” you defined in the “Linkage Properties” window in Flash.

```

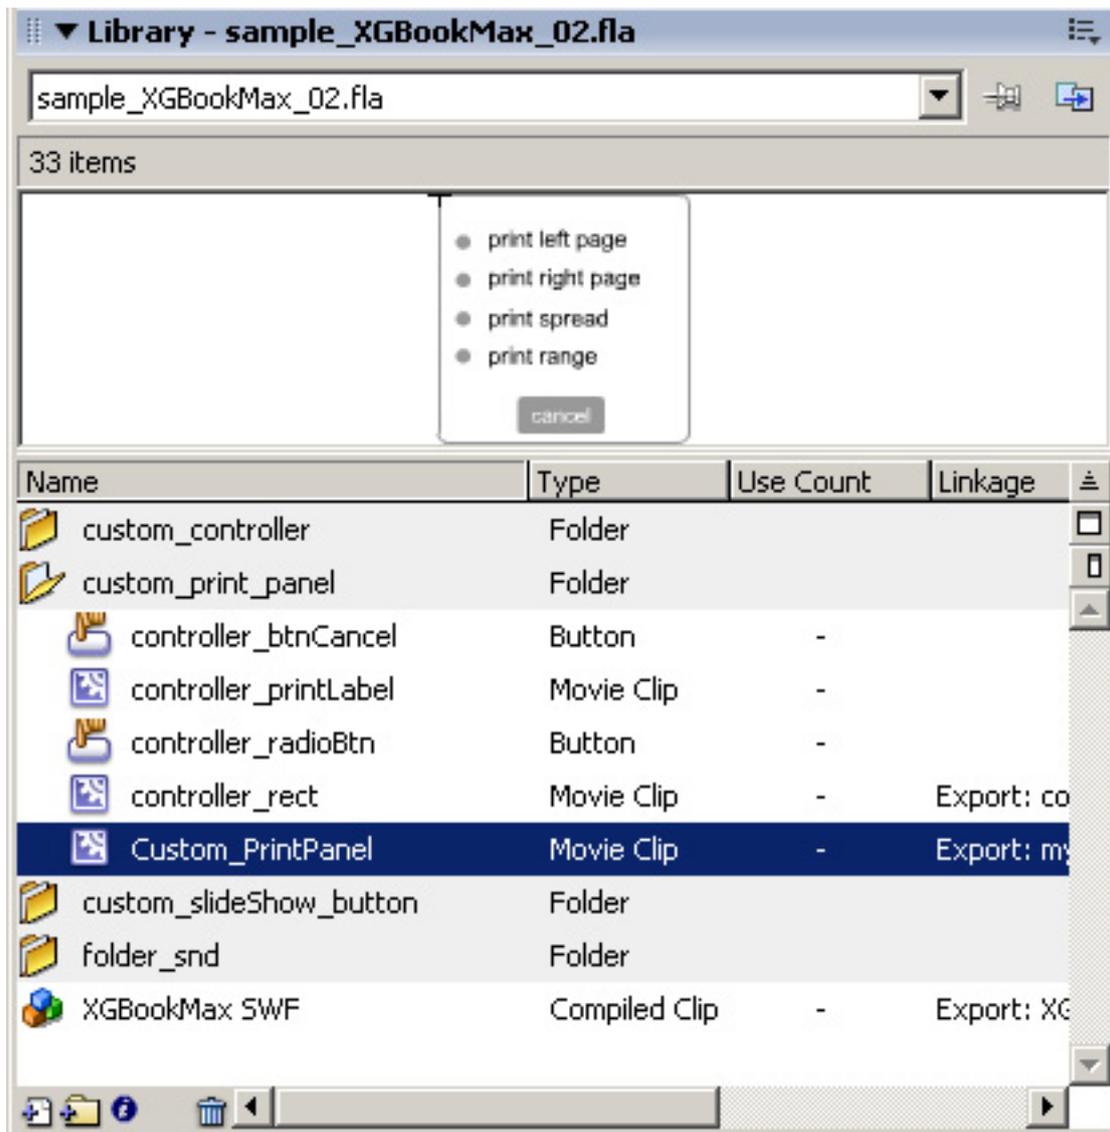

<!-- Controller Configuration Node -->
<Configuration_Controller customControlPanel="myControlPanel"
themeColor="0x666666" positionX="100" positionY="10"/>

```

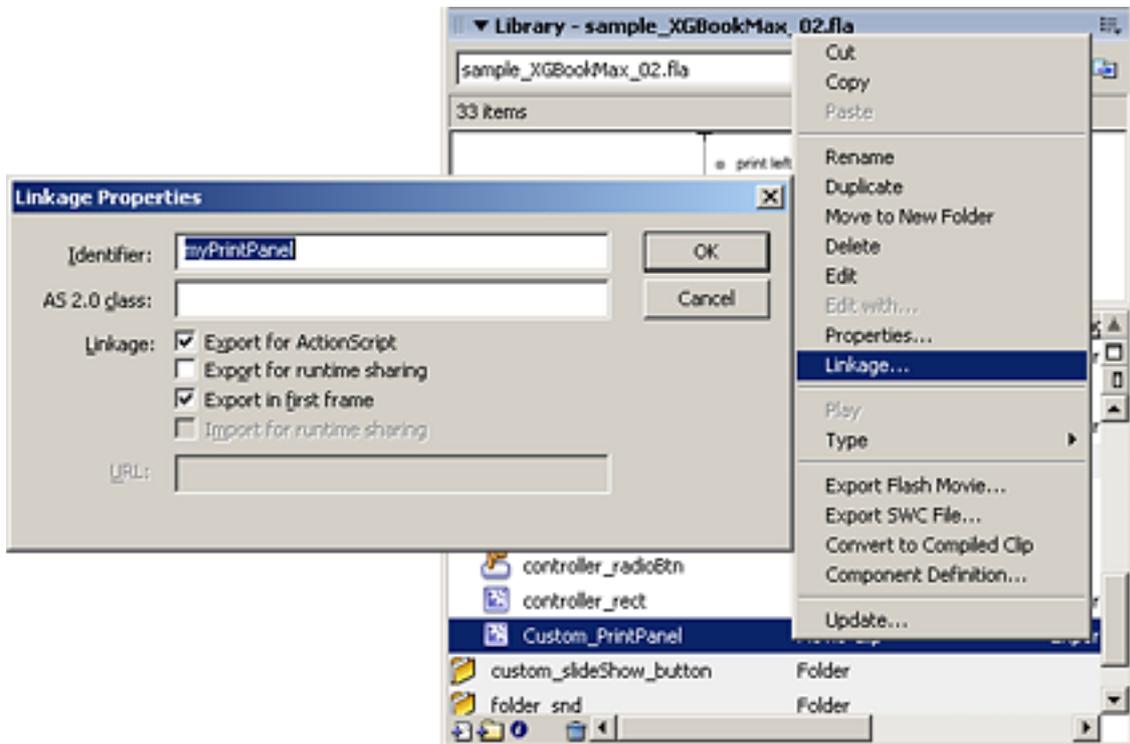

- That's it. Now you are ready to test it.

2. PRINT PANEL CUSTOMIZATION

- Open the “**Custom_PrintPanel**” folder and select the “**Custom_PrintPanel**” movie clip. This is the symbol that needs to be edited. Please, remember to **always use** and edit this symbol. It has the proper instance name. **Do not** make your own movie clip and **do not** use a different instance name, it will not work.

- Modify the “Custom_PrintPanel” movie clip to your liking.
- Give the “Custom_PrintPanel” movie clip “Linkage Properties” (REMEMBER: it will not work without).

- In the xml file define the attributes “customPrintPanel” in the “<Configuration_Controller>” node. Put the same “Identifier” you defined in the “Linkage Properties” window in Flash.

```

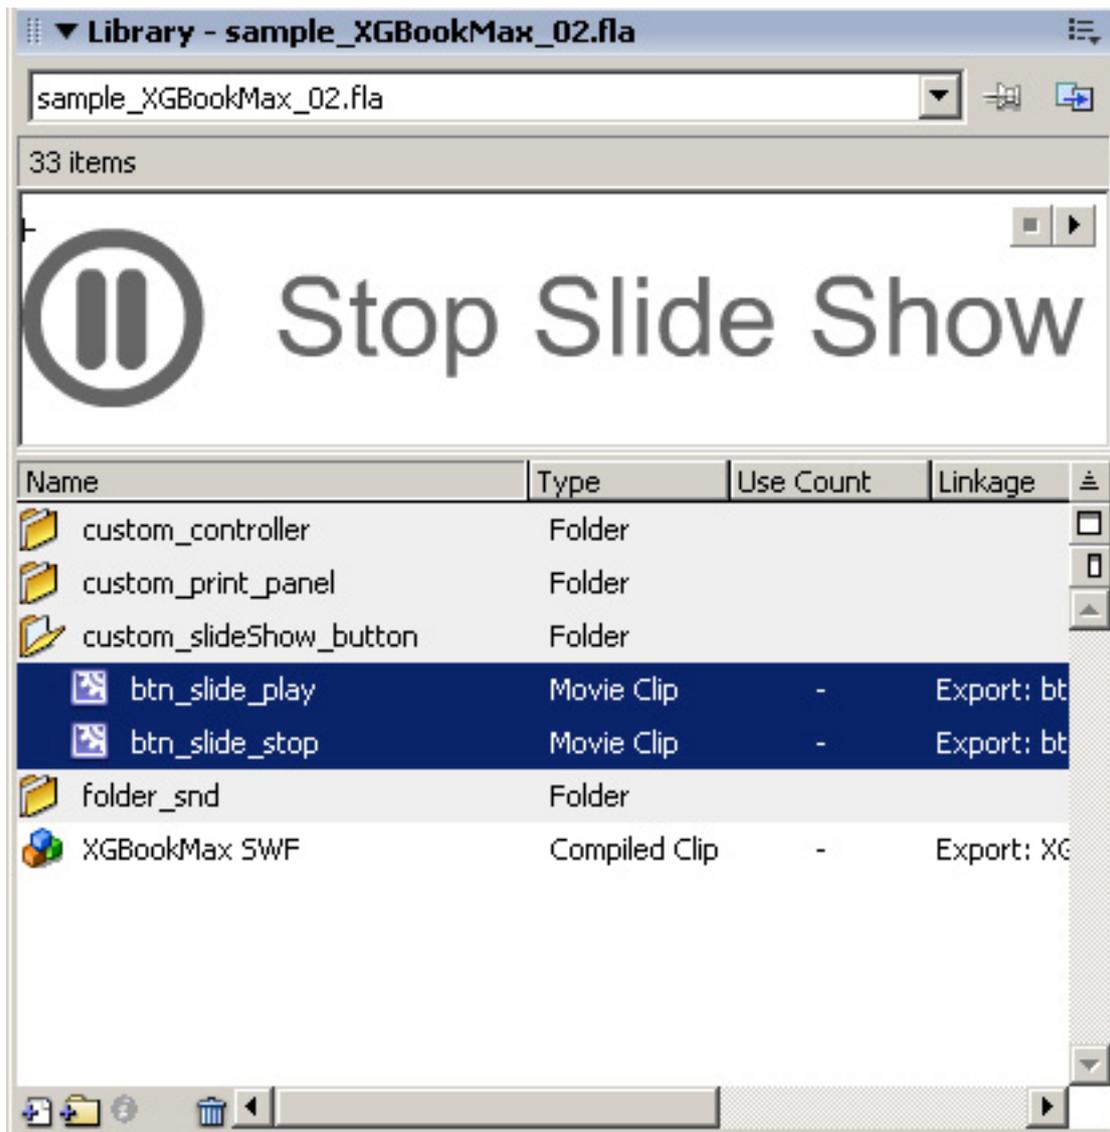

<!-- Controller Configuration Node -->
<Configuration_Controller customPrintPanel="myPrintPanel" visible="true"
themeColor="0x666666" positionX="100" positionY="10"/>

```

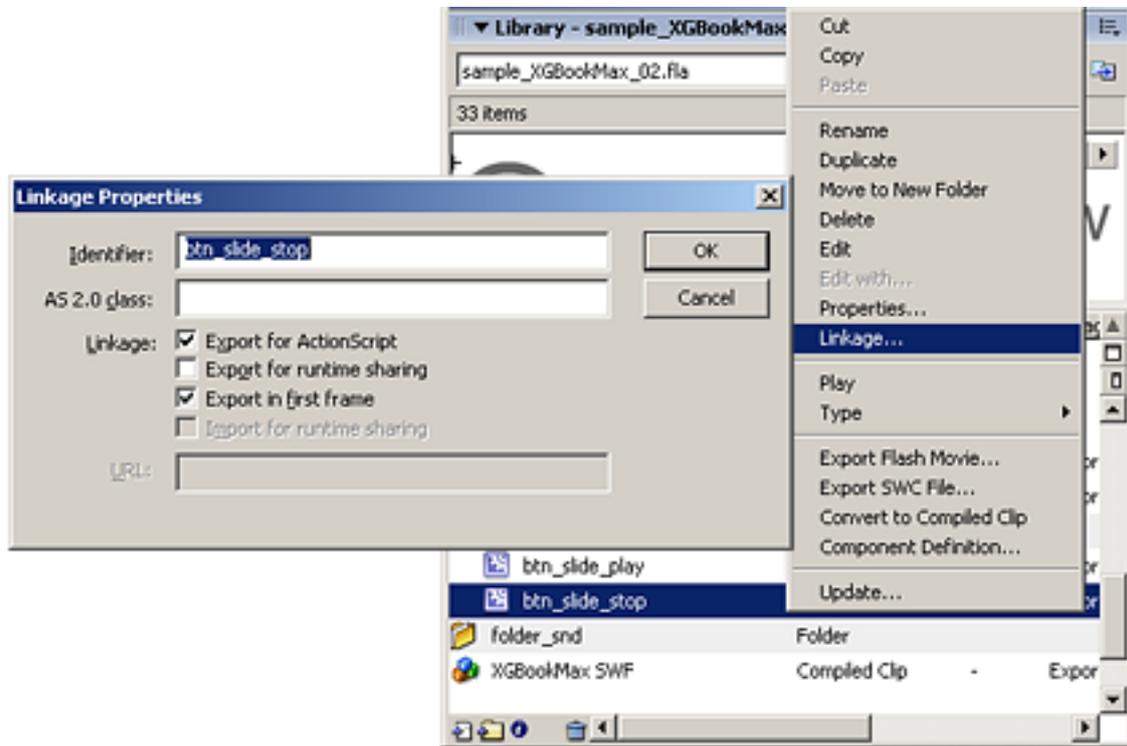

- That's it. Now you are ready to test it.

3. SLIDE SHOW BUTTON CUSTOMIZATION

- Open the “**Custom_SlideShowButton**” folder and select the “**btn_slide_play**” and “**btn_slide_stop**” movie clips. These are the symbols that need to be edited. Please, remember to **always use** and **edit** these symbol. They have the proper instance name. **Do not** make your own movie clips and **do not** use different instance names, they will not work.

- Modify the “btn_slide_play” and “btn_slide_stop” movie clips to your liking.
- Give the “btn_slide_play” and “btn_slide_stop” movie clips “Linkage Properties” (REMEMBER: they will not work without).

- In the xml file define the attributes “customPlayButton” and “customStopButton” in the “<Configuration_Slide >” node. Put the same “Identifiers” you defined in the “Linkage Properties” window in Flash.

```
<!-- Slide Show Configuration Node -->
<Configuration_Slide showSlidePanel="true" customPlayButton="btn_slide_play" customStopButton="btn_slide_stop"
*="1" islooping="true" positionX="700" positionY="17"/>
```

- That's it. Now you are ready to test it.

4. THUMBNAIL PANEL BUTTONS CUSTOMIZATION

(there are no sample images for this Customization. Please, do the same as for the previous Customizations)

- Open the “**Custom_ThumbnailPanelButtons**” folder and select the “**customButtons**” movie clip. These are the symbols that need to be edited. Please, remember to **always use** and **edit** these symbol. They have the proper instance name. **Do not** make your own movie clips and **do not** use different instance names, they will not work.
- Modify the “**customButtons**” movie clip to your liking.
- Give the “**customButtons**” movie clip “Linkage Properties” (REMEMBER: they will not work without it).
- In the xml file define the attributes “customButtonS” in the “<Configuration_Thumbnail>” node. Put the same “Identifiers” you defined in the “Linkage Properties” window in Flash.
- That's it. Now you are ready to test it.
